

NetSuite: Beyond ERP - A Complete Business Platform

Discover how NetSuite's integrated cloud platform transforms business operations. Join us to explore the full capabilities that make it more than just an ERP system.

 by Kimberly Wiethoff

The Power of Integration

Cloud-Based Platform

Access your data from anywhere, anytime with Oracle's secure infrastructure.

Real-Time Updates

Get instant visibility across departments with synchronized data.

Modular Design

Add capabilities as your business grows without disruption.

Scalable Architecture

Support business from startup to enterprise with the same platform.

Financial Management Excellence

Real-Time Visibility

Monitor key financial metrics instantly. Make decisions based on current data.

Multi-Currency Support

Manage global operations seamlessly. Consolidate financials across regions.

Tax Management

Automate compliance requirements. Reduce audit risks with built-in controls.

Project Costing

Link expenses directly to projects. Track budgets against actuals in real time.

Project Management Reimagined

Project Creation

Define scope, timelines, and deliverables in one system.

Resource Assignment

Match the right people to tasks based on skills and availability.

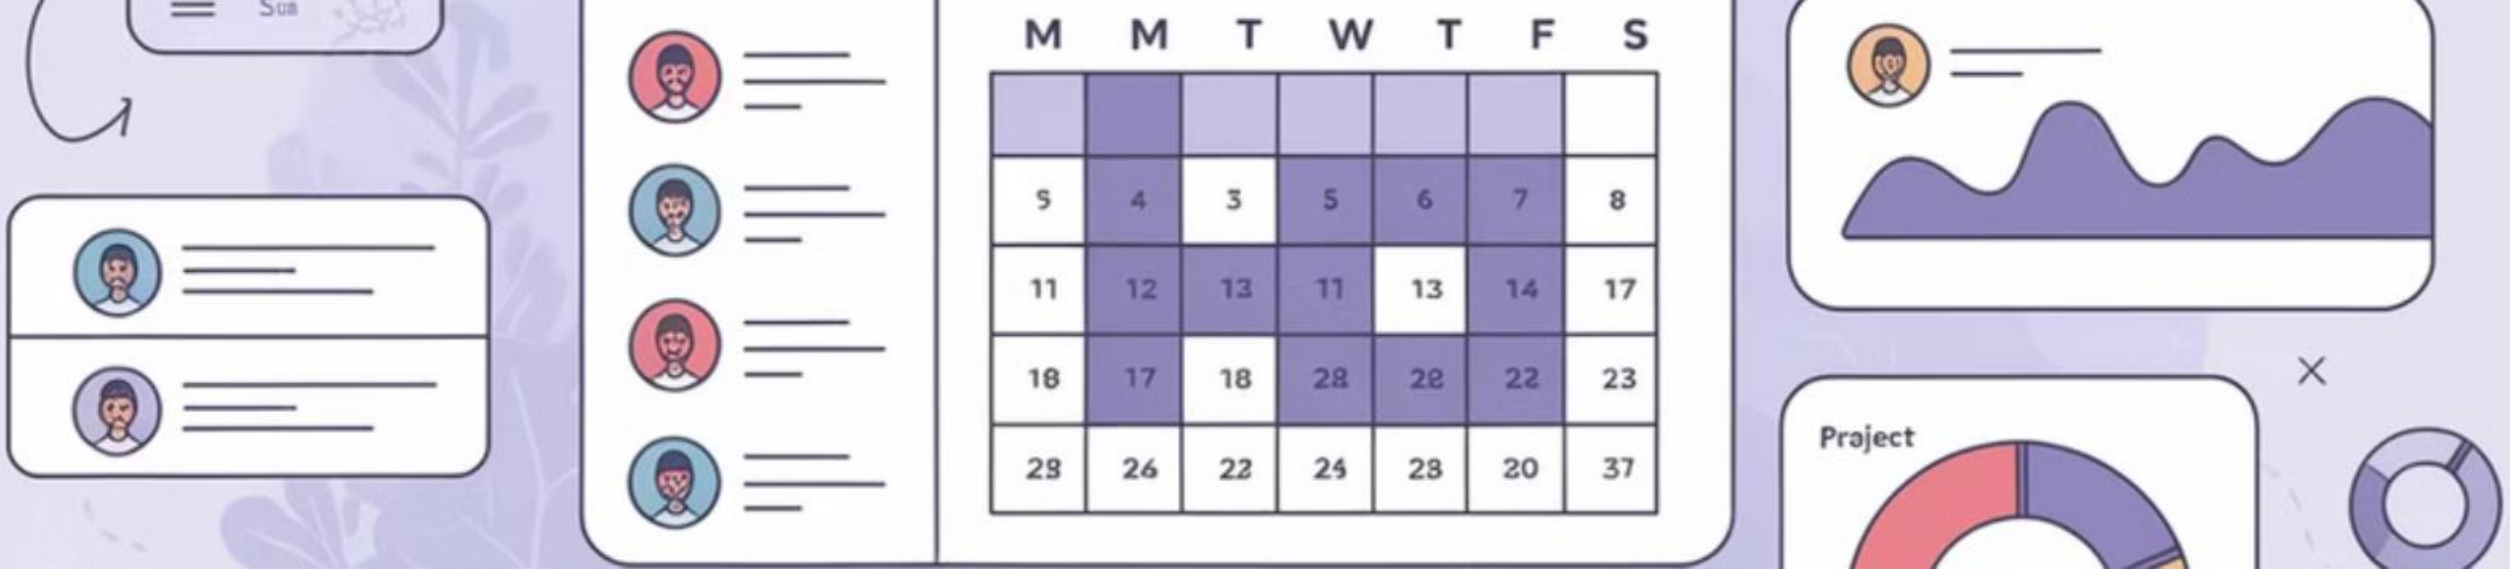

Progress Tracking

Monitor milestones and completion rates with visual dashboards.

Budget Management

Compare planned vs. actual costs throughout the project lifecycle.

Optimize Your Resources

Availability Tracking

View real-time resource calendars to prevent overbooking and conflicts.

Workload Balancing

Distribute work evenly across teams to prevent burnout and delays.

Skills Management

Match project requirements with team capabilities for optimal assignments.

Utilization Reporting

Analyze resource usage patterns to improve operational efficiency.

Customer Relationship Excellence

Lead to Proposal

Track potential clients from first contact through proposal development.

Project Scoping

Document client requirements and expectations in a centralized system.

Delivery Management

Keep clients informed with automated status updates and milestones.

Post-Project Support

Manage ongoing maintenance and enhancement requests seamlessly.

Streamlined Supply Chain

Delivery

Track shipments in real-time

Inventory

Maintain optimal stock levels

Purchasing

Automate procurement workflows

Planning

Align supply with project timelines

Keep your projects on schedule with materials and assets delivered just when you need them. NetSuite synchronizes procurement with project demands.

Data-Driven Decision Making

Real-Time Dashboards

Monitor KPIs with customizable visual displays. Get instant insights into project health and financial performance.

- Project profitability
- Resource utilization
- Milestone completion

Custom Reports

Build tailored reports for different stakeholders. Deliver the right information to the right people.

- Executive summaries
- Client status reports
- Team performance metrics

Predictive Analytics

Anticipate issues before they impact projects. Use historical data to improve future performance.

- Risk identification
- Trend analysis
- Resource forecasting

Tailored to Your Business

SuiteFlow

Create custom approval workflows without coding. Automate routine processes for consistent execution.

SuiteScript

Develop JavaScript customizations for unique requirements. Extend standard functionality to match your exact needs.

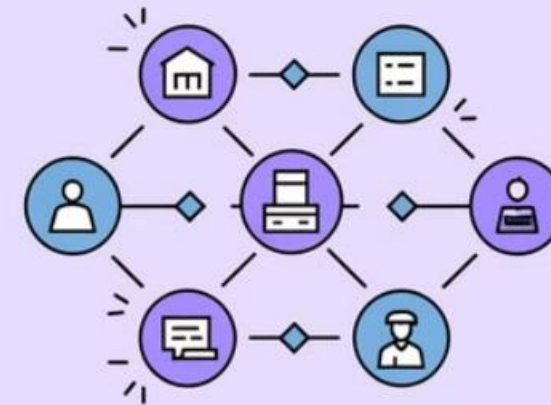

Forms & Fields

Design custom data entry screens for your teams. Capture industry-specific information with minimal clicks.

Role-Based Access

Control who sees what based on job function. Maintain security while enabling collaboration.

Extend Your Capabilities

Tap into NetSuite's robust SuiteApp Marketplace featuring over 600 certified, third-party solutions. Seamlessly integrate your essential business tools while maintaining data integrity across a unified platform, eliminating silos and accelerating your operational efficiency.

The Strategic Advantage

1 Complete Visibility

Full view across all business functions

2 Time Savings

Average reduction in manual reporting

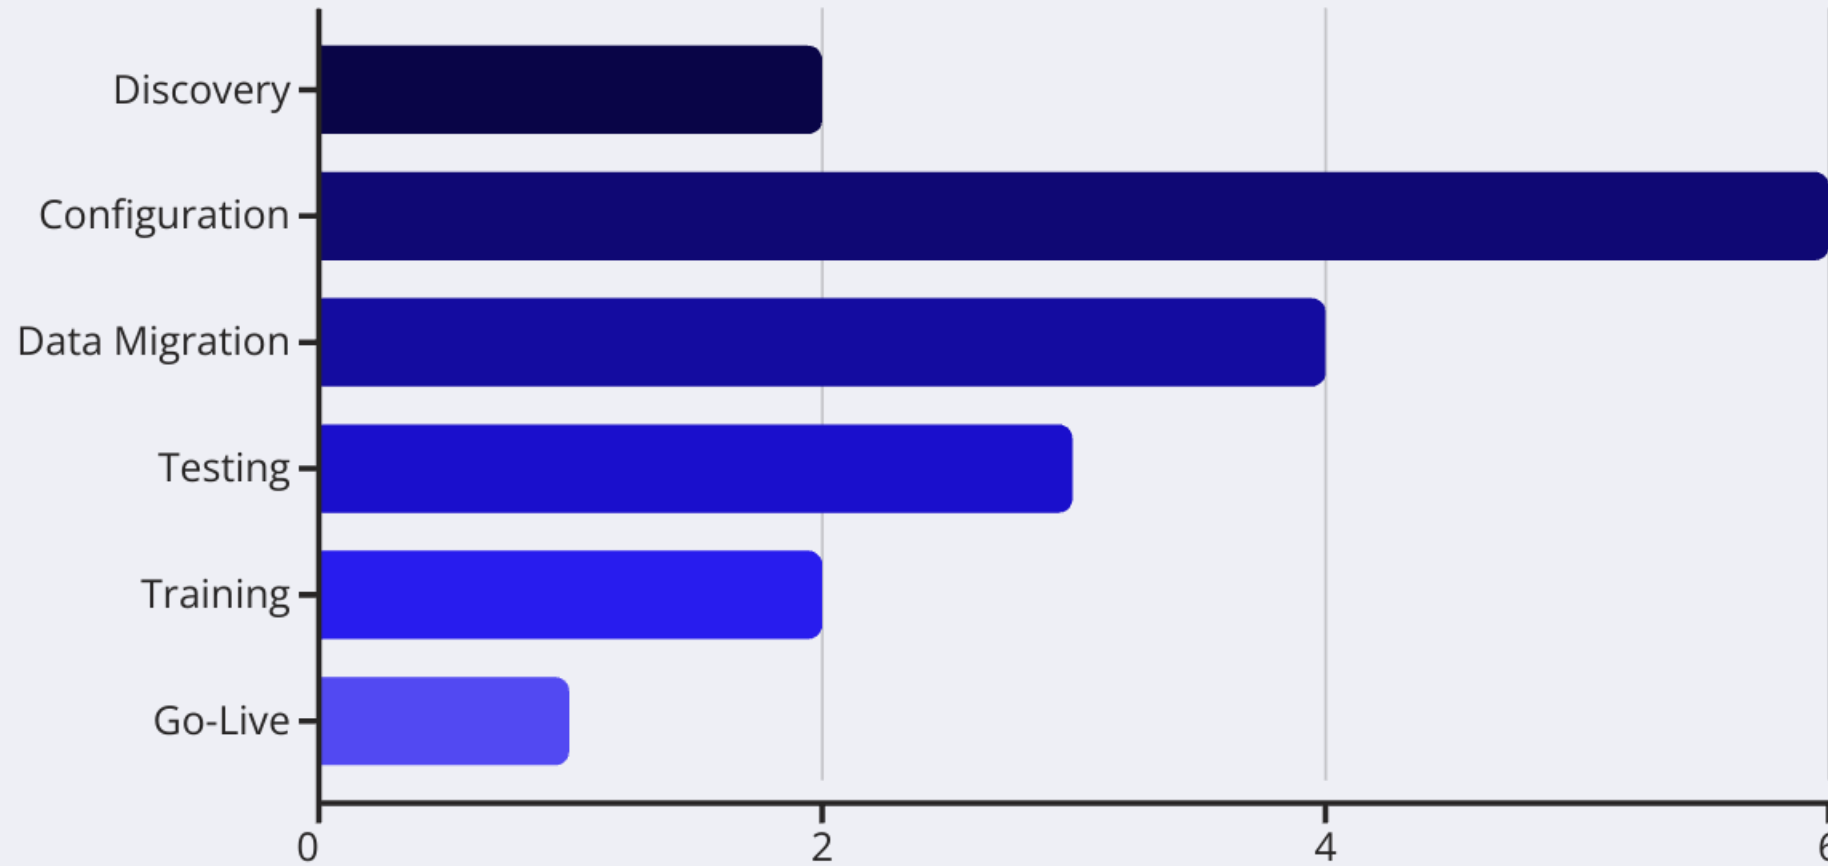

3 Profit Increase

Typical improvement in project margins

4 Uptime

System reliability for continuous operations
